DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, 16-21, a drive circuit for display device, classified in class 345/204.
- II. Claims 8-15, 22-26, a voltage generating circuit, classified in class 345/90.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group I has separate utility such as using a second voltage supply connected to a second transistor; this does not require the particular voltage generating circuit in order to properly function. See MPEP § 806.05(d).

Similarly, the invention of Group II has separate utility such as including various parts of a voltage generating circuit such as a first and second variable resistances connected to a first and second operational amplifier; that does not require the specific voltage supply circuit in order to properly function.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
